

BASIC HELP FILE

HOW TO USE SPLINE

Introduction

Thank you for downloading

This file is designed to be simple, animated, and interactive, making it perfect for professional environments, web landing pages, or virtual office designs. Follow the guide below to make the most out of your Spline scene.

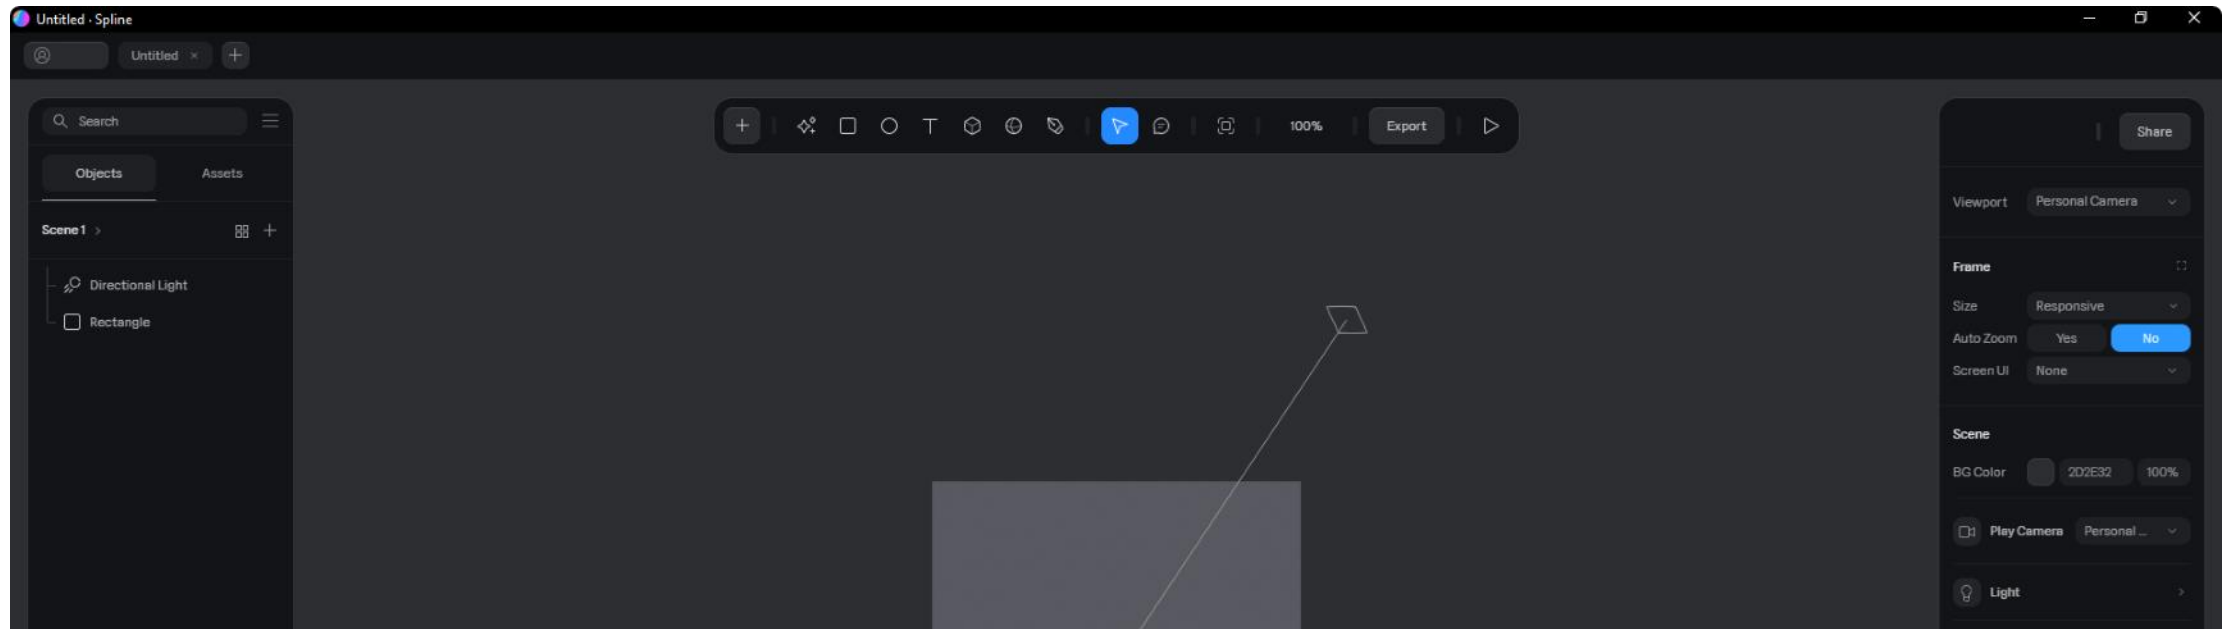

Requirements

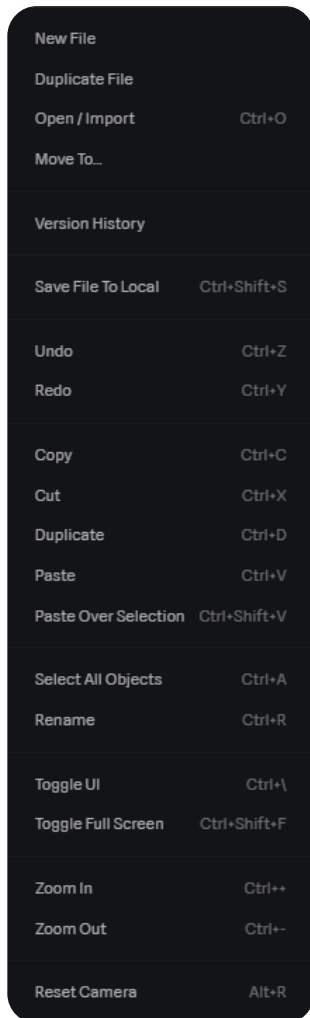

Software:

Spline 3D Editor (latest version)

Browser:

Chrome, Firefox, or any WebGL-compatible browser for live preview

How to Open the Project

1. [Download the file](#) from your account on Envato or the platform where it was purchased.
 2. [Open Spline](#) on your desktop or web browser (<https://spline.design>).
 3. [Drag and drop](#) the file into Spline, or click "Open Project" from the File menu to load the scene.
-

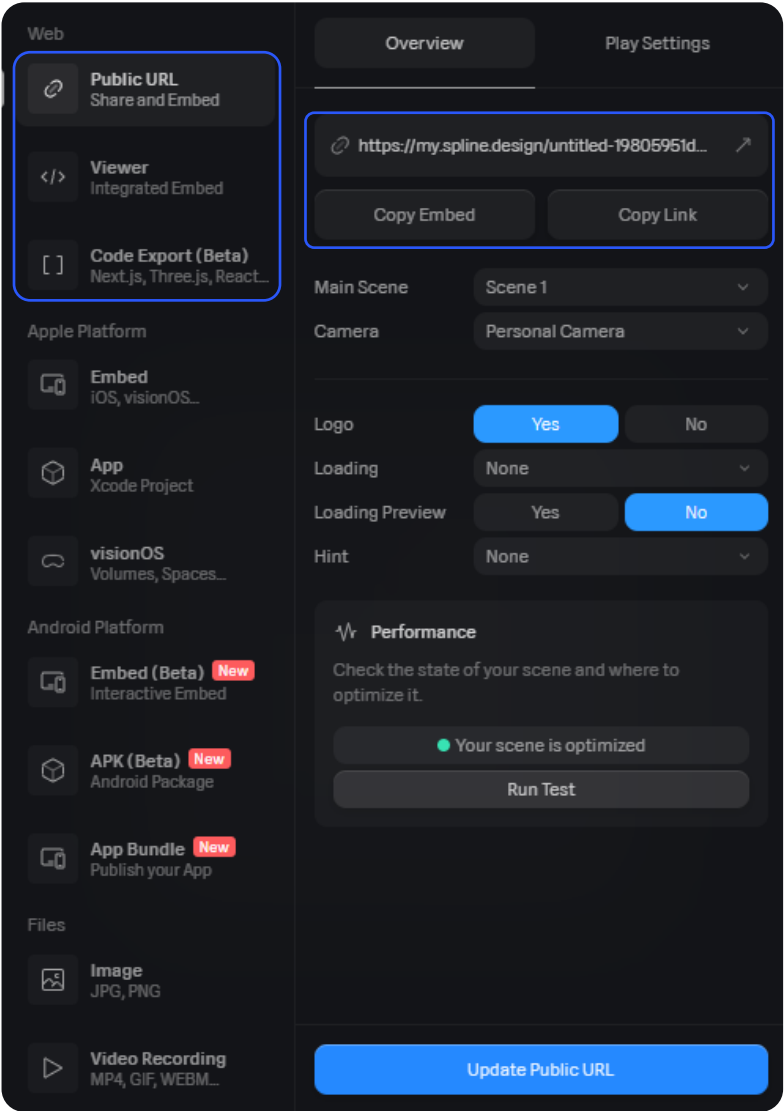

Exporting Your Scene

1. [Export for Web](#)
Go to Export > Web to generate an embeddable HTML file or shareable link. You can then integrate this scene into your website or portfolio by embedding the link or adding it to your HTML code.
2. [Export for 3D Render](#)
Go to Export > GLTF/GLB/OBJ to export the scene for use in other 3D software or rendering engines.

You can view your project in real-time by clicking "[Play](#)" in the top toolbar. This opens an interactive, browser-based version of your scene.

For website and coding needs
